

Assalamu Alaikum Wa Rahmatul-Allah wa Barakutah

Jazakumullahu Khairan for taking time out to listen and judge my presentation. First let me introduce myself. My name is Bilal El-Mohri and I am a senior at Michigan Islamic Academy and the topic I have chosen is The Benefits and Harms of Foods Mentioned in the Quran through a Scientific Perspective. I have chosen this topic to educate the public to the unknown health benefits or harms of certain foods. To do this, I formed a presentation to present to a public library. My goal being to educate the public who are mostly non-muslims of the foods in the Quran. This will provide important information which can be applied to a daily lifestyle. After setting up for my presentation, I noticed the library was empty so I had a too small audience. I used the time to practice my presentation. I then decided to schedule a new presentation at the Ann Arbor Masjid with Malik Abdulkareem to educate those within my community. Malik's presentation was about science and the Quran, with his topic related to mine, we merged our information into one cohesive presentation. We then gave out surveys to collect primary research. Since the presentation was now in an Islamic environment. Malik and I incorporated some islamic lessons that can be derived from our senior project. I hope you enjoy my senior project and Jazakumullahu Khairan for listening.

Best regards,

Bilal El-Mohri
